

An **SS Bellow Hose MS BSP** is a flexible stainless steel corrugated hose covered with an SS protective braid, fitted with **MS (Mild Steel) BSP** (British Standard Pipe) threaded end connections. It is designed to safely handle high temperatures, vibrations, and pressure in steam, oil, and gas applications.

These hoses are widely customizable depending on your required length, nominal diameter (often ranging from 1/4" to 12" and beyond), and pressure rating. The Mild Steel (MS) BSP fittings are typically provided as male (BSPT) or female (BSPP) threaded ends, making them easy to install directly into standard pipeline equipment..
